Financial Risk Management

The main risks arising from the Company's financial instruments are liquidity risk, credit risk and market risk. The Board of Directors is responsible for the overall risk management approach and for approving the risk strategies and principles. The BOD reviews and approves policies for managing each risk and they are summarized below:

Liquidity Risk is the risk that the Company will be unable to meet its obligations when they fall due under normal and stress circumstances. To limit the risk, the Company closely monitors its cash flows and ensures that credit facilities are available to meet its obligations as and when they fall due.

Credit Risk is the risk that the Company will incur a loss because its customers or counterparties fail to discharge their contractual obligations. The Company manages and controls credit risk by trading only with recognized, creditworthy third parties. It is the Company's policy that all customers who wish to trade on credit terms are subject to credit verification procedures. For transactions that involve special credit arrangement, the Company requires the approval from the Board of Directors. In addition, aging of receivables are reviewed on a monthly basis with the result that the Company's exposure to bad debts is not significant.

As of 31 December 2017 and 2016, the Company's maximum exposure to credit risk is equal to the carrying values of its financial assets since it does not hold any collateral or other credit enhancements. There are no significant concentrations of credit risk on the Company's financial assets.

Market risk is the risk of change in fair value of financial instruments from fluctuation in market prices (price risk), foreign exchange rates (currency risk) and market interest rates (interest rate risk), whether such change in price is caused by factors specific to the individual instrument or its issuer or factors affecting all instruments traded in the market.

Foreign Currency Risk

Foreign currency risk arises when transactions are denominated in foreign currencies.

The Company is not exposed to foreign currency risk since the Company does not have any transactions denominated in foreign currency.

Equity Price Risk

Equity price risk is the risk that the fair value of quoted AFS investments will fluctuate as the result of changes in the value of individual stocks. The Company's exposure to equity price risk relates primarily to the Company's quoted AFS investments. As of 31 December 2017, the Company does not have quoted AFS investments.

Other Items

The Company does not need any government approval for its principal products or services and is not required to comply with specific environmental laws. It does not have any publicly announced new product or service. Since the company is engaged in the business of internet online related products relating to database search engine, there is no need for raw materials and suppliers.
